CloudMine Included in TechRadar Report on Patient Engagement Technologies

Report Aims to Help CIOs Assess Key Established and Emerging technologies that Underpin Patient Engagement

PHILADELPHIA, PA, UNITED STATES, November 22, 2016 /EINPresswire.com/ -- (Philadelphia) – CloudMine, a secure, cloud-based platform that helps healthcare and pharmaceutical organizations to build intelligent, connected applications, has been included in Forrester's August 2016 report: TechRadar™: Patient Engagement Technologies, Q3 2016 which aims to help CIOs assess 16 key established and emerging technologies that underpin patient engagement. CloudMine was one of 29 vendor and user companies to be interviewed for the report.

CloudMine

> "We are diligent in our mission to propel patient engagement, improve the quality of care, and reduce costs."
>
> *Brendan McCorkle, CEO of CloudMine*

Per the report, the healthcare industry, which is under tremendous pressure to transform, is being currently driven by three imperatives: improving health outcomes, expanding access by consumers to quality healthcare, and controlling escalating costs, all while operating in an increasingly consumer-directed market. Key takeaways from the report focus on how patient engagement is critical for the future of healthcare firms, how technologies with high ROI come from outside healthcare, and why Electronic Health Records (EHRs) are necessary today but will decline in the future.

"We're proud to have been included in Forrester's TechRadar report on Patient Engagement Technologies," said Brendan McCorkle, CEO of CloudMine. "We are passionate about enhancing the digital patient experience through our technology, the Connected Health Platform, and are diligent in our mission to propel patient engagement, improve the quality of care, and reduce costs."

CloudMine successfully raised a Series A totaling $7.25 million in 2015, led by Safeguard Scientifics. The company also saw revenue growth triple over the year, landed several landmark clients, and more than doubled headcount.

The Connected Health Platform is now available at www.cloudmineinc.com.

About CloudMine
CloudMine is a secure, cloud-based platform that helps healthcare and pharmaceutical organizations

to build intelligent, connected applications. CloudMine connects the world of healthcare data to make it fully interoperable, enabling organizations to operationalize data through application development, analytics and workflow. The CloudMine Connected Health Cloud empowers healthcare organizations to rapidly build engaging digital experiences by removing the complexity of app development, and allowing focus on business needs. CloudMine's Connected Health Cloud is being used by world-class enterprises including Thomas Jefferson University Hospitals, Biomeme, Mylan Specialty, Endo Pharmaceuticals, Barnes & Noble College, and Digitas Health to drive mobile-first solutions.
