

New Honeycomb Wireless Bluetooth® Portable Speaker Blends Modern Styling, Big Sound and Simplicity

WESTMONT, NEW JERSEY, UNITED STATES, November 29, 2016 /EINPresswire.com/ -- Honeycomb Sound LLC announces the launch of their new wireless Bluetooth® portable speaker, the model HC-1, available in silver with white trim, and black with red trim for \$149. Derived from nature's own honeycomb cell design, the speaker incorporates these structural advantages of strength, efficiency and quality; resulting in high power, low distortion fidelity.

The hexagonal comb of the honeybee has been a subject of research for companies ranging from aerospace to architecture. Honeycomb structures form a perfect geometry allowing for a minimum amount of material in relation to weight and cost. There is a high strength-to-weight ratio. This cell shaped structure provides a material with low density and high compression. In terms of audio speaker design, this produces sound that is tight and clean.

The Honeycomb speaker enclosure includes a 40 watt Class D high efficiency stereo amplifier with DSP; Bluetooth® 4.0 wireless technology; four 2" full-range speakers; dual dynamic ports; 2200 mAh lithium-ion battery; and tactile control panel. This represents a design philosophy of simplicity, compactness, and quality system integration.

At the core of the Honeycomb stereo speaker system, is the idea of big sound and deep bass from a small package. Measuring 14"(l) x 6.5"(h) x 4.5"(d), the speaker easily fills a large room or outdoor space. The long-lasting battery allows for portability within the home, office, or outside. This technology replaces the bulky, wired stereo systems of the past, with a new, stylish, easy to use, home audio solution.

Additional features within the Honeycomb Sound HC-1 speaker include inputs for playback from 3.5mm, USB flash drive, and micro SD/TF card. The speaker also has a power bank function allowing for charging of mobile phones. Constructed of a durable ABS plastic enclosure with high-end iron speaker grilles, the Honeycomb system will provide years of listening enjoyment and aesthetic beauty.

The Honeycomb Sound HC-1 speaker system is available for \$149 with free shipping from the company's website, <http://www.honeycombaudio.com>

Honeycomb Sound LLC is a New Jersey based high-tech consumer electronics development company whose core mission is to advance current audio technology by striving to create innovative products centered on the parameters of quality, design, and value.
