

Skyline Exhibits Launches the Trade Show Industry's Brightest LED Arm Light

New TriaSol™ LED Arm Light is Three Times Brighter Than Competing LEDs

ST PAUL, MN, USA, December 1, 2016 /EINPresswire.com/ -- [Skyline Exhibits](http://www.skyline.com) has just launched its latest innovative trade show display product, the TriaSol™ LED Arm Light. TriaSol is the brightest LED arm light available in the trade show display industry – 300% brighter than typical LED arm lights.

"We are very excited about the launch of TriaSol. Trade show display lighting technology continues to evolve and has been moving toward LED for many reasons. LED lights are more durable than other lights, they're energy efficient and have low heat output," said [Sofia Troutman](mailto:Sofia.Troutman@skyline.com), Customer Engagement and Industry Relations Manager, Skyline Exhibits (www.skyline.com). "An added benefit is that TriaSol uses conventional 120V power, which eliminates the need for a bulky, external transformer."

Fewer Fixtures Reduce Clutter, Save Money

For larger exhibits, TriaSol allows you to use fewer fixtures than other kinds of lighting. That means less visual clutter from cords and transformers as well as reduced I&D time. And, because you can daisy chain as many as 15 TriaSol fixtures, you can also reduce the number of cords that must be connected to power.

Universal Use

Skyline TriaSol LED Lights are 43 Watts and auto-ranging so they can be used anywhere in the world with the addition of an appropriate IEC country cord. There is no need to worry about lighting regulations as TriaSol lights are approved for all show halls.

"The initial feedback has been fantastic and we really think TriaSol is going to be the next big thing in trade show display arm lighting. While exhibitors love the now-common LED technology, clients often ask for something even brighter to illuminate their displays and really make them come to life. TriaSol does just that," concluded Troutman.
