PUNE, INDIA, December 5, 2016 /EINPresswire.com/ -- [Global Forging Market](#)

Forging is a process in which metals are shaped into desired designs by applying compressive forces. This technique is very robust compared to other metal-shaping techniques because of the strength acquired by the metal during forging. Some metals are processed hot, while others are processed cold. There are several forging methods such as closed die, press, and upset forging; open die forging; and cold forging. The Automotive industry is the major end-user of forged products, followed by the Engineering Machinery and Railway industries.
