The analysts forecast the Global Bio-detection market to grow at a CAGR of 14.19 percent over the period 2013-2018.

Bio-detection has emerged as a solution to the public and governments. With an increase in bio-terrorism, the occurrence of illness and deaths is very frequent. This event is caused by the airborne chemicals or pathogens that are released by a terrorist or a group of people or even by an individual for a motive. These pathogens can be detected by a system called bio-detection, which signals the entry or the existence of a virus. The increasing attacks have brought a major concern to the public as well as governments. Attacks such as the 2001 Anthrax scare, the 2003 severe acute respiratory syndrome (SARS), the 2004 Ricin letters, the 2009 H1N1, and the 2014 Ebola outbreaks have driven governments to increase their bio-surveillance budgets.
