

StayblCam Launches World's Smallest Gimbal Stabilizer for Smartphones and GoPro

The StayblCam 1X is the world's smallest gimbal stabilizer for iPhone, smart phones, and action cameras such as the popular GoPro.

SCOTTSDALE, AZ, USA, December 6, 2016

/EINPresswire.com/ -- The critically acclaimed StayblCam first made headlines a few years back when it introduced the first [video stabilizer](#) that was designed to work with both smart phones and action cameras. Now the Arizona based company is making waves again, with the world's smallest and lightest stabilizer released to date.

Weighing in at just 6 ½ ounces, and 2 ¾ inches in diameter - the [StayblCam 1X](#) is expected to quickly become the stabilizer of choice among active outdoor video and photography enthusiasts - as well as the "action enthusiast" who wants to give their videos a more professional stable look and feel. As another first to the market of video stabilizers, StayblGear introduces AI (artificial intelligence) into a stabilizer – essentially allowing the unit to "learn" and constantly improve the motion based on a user's movements with the 1X stabilizer model.

Fully automatic calibration technology extends the 1X's battery life while at the same time, improving stability and motion. The motor is completely silent utilizing a high quality brushless motor for zero noise emission – effectively preventing noise in the video recording.

The StayblCam 1X is designed to mount to a variety of existing mounting options and is compatible with existing GoPro mounts, including helmet mounts, extension poles, bicycle and motorcycle mounts, and car suction cup mounts to name a few. Practical applications include mounting to a bicycle, ATV, snowmobile or motorcycle for off road or on road scenic views of the action on the trail or road ahead.

Additionally, the ultra [compact stabilizer](#) works equally well for handheld use with the already popular StayblCam model, or for mounting on handheld poles or similar – giving extra stability for walking and professional event shots such as weddings. The unit is simple and easy for even complete amateurs to operate without any training. Just place your phone or camera in the cradle of the StayblCam 1X, power the unit on, and attach it to the handle or mount of your choice.

The integrated lithium battery, charged via USB cable from any power source, provides up to 3 hours of continuous use on a full battery. Each unit comes with a weatherproof outdoor case, charging cable, and industry standard action camera mounting clips.

The product will be immediately available for pre-order on December 1st, 2016 – coinciding with the

World's smallest gimbal stabilizer for iPhone and GoPro cameras

company's U.S. launch – at 1x.stayblcam.com. The StayblCam 1X retails for \$149.95 USD with free shipping within the U.S.
