PUNE, INDIA, December 9, 2016 /EINPresswire.com/ -- [Global Radiofrequency Ablation Market](#)

Radiofrequency ablation devices are used to treat medical conditions such as cancer tumours with help of imaging techniques such as computed tomography, magnetic resonance imaging, and ultrasound by using MI techniques. This involves high frequency electromagnetic waves by generating heat energy (alternating current). Radiofrequency ablation is used by surgeons to destroy cancerous cells, to remove or trim obstructive tissues, and deaden nerves. The process is carried by inserting a special needle through the skin onto the tumour and targeted to the specific tissue/nerve with radiofrequency electrical energy to heat the tumour through an active exposed electrode tip. The heating generated induces cellular death as a result of irreversible protein denaturation. This technology has wide applications and is used in various medical fields such as cardiac rhythm, oncology, cerebral tumours, gynecology, and renal denervation for hypertension, pain management, and cosmetology.
