Market Scenario:

The oil & gas industry has been facing a downswing post-April 2014 following persistent oil price decline. However, there has been some stabilization in the prices in recent times due to reducing supply-demand gap and other macro-economic factor. These factors have instigated a positive outlook for the oil & gas industry, posing a favorable market for upstream services. Wireline services are thereby expected to witness a promising growth outlook in the years to come.
