

PMA Publishes Construction Manager At-Risk Delivery Strategies

Introducing progressive CMAR delivery, an approach defined by a relationship of trust and confidence between the construction manager and the owner.

DETROIT, MI, USA, December 19, 2016 / EINPresswire.com/ -- CEO and founder of PMA Consultants, Dr. Gui Ponce de Leon, PE, PMP, LEED AP, with contributions from other PMA construction management experts, has authored and released a new publication entitled [Construction Manager At-Risk Delivery Strategies](#). This publication is the result of a detailed examination of CMAR pros and cons by highly experienced project management professionals.

The authors introduce the concept of progressive CMAR delivery, an approach defined by a relationship of trust and confidence between the construction manager and the owner. Progressive CMAR delivery continues the PMA tradition of emphasis on reliable schedules, project controls and [risk mitigation](#), and lays out a specific seven-step strategy toward CMAR success. Using the progressive CMAR model, project owners are able to re-prioritize cost, achieve rigorous value optimization, and counter inherently higher cost tendencies with a shorter schedule, faster delivery, higher facility quality and a minimal incidence of claims.

This incisive work is a must read for project owners, project management professionals, and construction attorneys.
