

Baselining – the Latest Update in Easy Projects

Easy Projects now includes Baselining that can help companies better understand some reasons behind missing the targets and address them in the future projects.

TORONTO, ONTARIO, CANADA, December 21, 2016 /EINPresswire.com/ -- [Easy Projects](#) started its journey back in 2003 when Logic Software developed it for internal management needs. But soon after, the platform saw its market launch when some of their clients developed an interest in the product and started requesting versions of the software for themselves. Logic Software saw a commercial potential of its PM solution and in the next few years Easy Projects has become one of the bestselling products of the company.

Since then, Easy Projects has been constantly reshaping to meet ever-growing customer needs. Having great experience in working with firms from various domains, Logic Software put many resources into making the PM platform highly flexible and expandable to cover as much market space as they could.

Easy Projects has seen numerous enhancements over the years that kept the platform relevant all this time adding to its flexibility and functionality. And now the project management platform sees yet another new feature – [Baselining](#).

It is too often when the initially created project plans have a somewhat optimistic target mark. Unfortunately, it has become a regular arrangement for many firms to miss the initial mark for reasons like overestimating their strengths or putting the goal too high.

With the Baselining feature, companies are now empowered to analyze all crucial steps made during the project and to determine why exactly the target was missed. Knowing the weaknesses is the first step in fixing them.

The newest feature is extremely easy to use. All that is needed is to lay out the project plan as usual and just click on one button “Baselining”. It’s done. With the project captured, management departments are now able to track all the progress and analyze it in a customized environment that can suit a specific business goal.

Easy Projects was already an advanced PM system with [numerous benefits embedded](#), and now with the latest update, its functionality can help various companies that utilize this system to reflect upon previous projects.

The update is not yet finished and Logic Software will be adding new improvements to Baselining with feedback from the customers in mind.

About Easy Projects and Logic Software Inc.
