

3D Printing Material Market Trends, Preferred Choices, Outstanding Growth, Sales & Affordable Pricing

Global 3D printing material Market Information by Material (metals, plastics, ceramics and others), by Application and Region - Forecast to 2022

PUNE, MAHARASHTRA, INDIA,
December 23, 2016 /EINPresswire.com/
-- Overview Of Market:

3D printing is a revolutionary technology with substantial potential to modify manufacturing business and society. It is the bridge between digital and physical disruption. 3D printing has evolved a lot from the basic initial production of simple plastic prototypes to the fully functional components. Technological advancements in the form of exhaustive variety of 3D printing material and high speed of manufacturing fuel the demand for such market. The market is highly

application driven and is used across end-use industries such as automotive, defense, healthcare and consumer sector and few more, which augments the growth of this market. A few constraints associated with this market include lack of awareness, lack of channel partner assistance and high cost and compatibility of 3D printing materials. The [global 3D printing material](#) industry is estimated to grow up to USD 1,500 million by 2022 and attain a CAGR of approx. 19% by the end of the forecasted period.

Regional Analysis of 3D Printing Materials:

“ We enable our customers to
unravel the complexity.”

Global 3D Printing Material Market Research Report -
Forecast to 2022

Drivers of Global 3D printing material Market

Major Distributors:

- Sandvik AB
- Höganäs AB
- Solvay S.A.
- EOS GmbH
- Arcam AB Inc.
- 3D Systems Corporation

The regional analysis of 3D printing material market is being studied for areas such as Asia Pacific, North America, Europe and rest of the world. Europe would be the largest growing market in terms of market size because of the expansion and development of industrial area of this region. However APAC is expected to register the fastest growth during the forecasted period.

Study Objectives of 3D printing material Market:

To provide detailed analysis of the market structure along with forecast for the next 6 years of various segments and sub-segments of the Global 3D printing material market.

To provide insights about factors affecting the market growth

To analyze the Global 3D printing material Market based on various factors- price analysis, supply chain analysis, porters five force analysis etc.

To provide historical and forecast revenue of the market segments and sub-segments with respect to four main geographies and their countries- North America, Europe, APAC, and Rest of the World (ROW)

To provide country level analysis of the market with respect to the current market size and future prospective

To provide country level analysis of the market for segment by material, application, and regions

To provide strategic profiling of the key players in the market, comprehensively analyzing their core competencies, and drawing a competitive landscape for the market

To track and analyze competitive developments such as joint ventures, strategic alliances, mergers and acquisitions, new product developments, and research and developments in the Global 3D printing material Market

Scope of the report

This study provides an overview of the global 3D printing material industry, tracking two market segments across four geographic regions. The report studies key players, providing a five-year annual trend analysis that highlights market size, volume and share for North America, Europe, Asia Pacific, and Rest of the World. The report also provides a forecast, focusing on the market opportunities for the next five years for each region. The scope of the study segments the global 3D printing material market as material, and application. On the basis of material it is segmented as metals, plastics, ceramics and others. On the basis of application it is segmented as automotive, health care, aerospace and defense, consumer goods and others.

Analysis For 3D Printing Materials:

Increased demand of detailed products with texture is expected to record a huge growth in global 3D printing material market. 3D printing materials are used in multiple sectors such as automotive, aerospace, consumer products, electronics and many more. A major driver of demand of this market is plastic, which is expected to sustain in future. Their property of getting molded in variety of products and sustaining stress is helping them to grow. Difficult manufacturing methods and high pricing act as restraints for global 3D printing market demand.

Increasing demand by many industries will lead to growth in this sector. Healthcare industry is expected to lead the market by the end of the forecasted period due to the wide application in healthcare sector. It is used to manufacture products like surgical equipment, orthopedic, dental, implants and tissue engineering products. On the basis of material, metal accounts for the largest share in the market due to its strength and durability. This makes it a preferred material in industries such as automotive and aerospace & defense. Development of new materials in this technology is expected to have a huge impact on quality of the end product as a new market trend will be established and there will be a positive influence on pricing of used materials.

About Market Research Future:

At Market Research Future (MRFR), we enable our customers to unravel the complexity of various industries through our Cooked Research Report (CRR), Half-Cooked Research Reports (HCRR), Raw Research Reports (3R), Continuous-Feed Research (CFR), and Market Research & Consulting Services.

MRFR team have supreme objective to provide the optimum quality market research and intelligence services to our clients. Our market research studies by products, services, technologies, applications, end users, and market players for global, regional, and country level market segments, enable our clients to see more, know more, and do more, which help to answer all their most important questions.
