

Demand of Aluminium Sheets & Roll Products in Africa & Middle East

The lightweight, corrosion resistant, high thermal conductivity and availability makes aluminium one of the most heavily demanded metals in the world.

AHMEDABAD, GUJARAT, INDIA, January 5, 2017
/EINPresswire.com/ -- 05.01.2017
Ahmedabad, India

In the year 2014 to 2015, the demand grew by more than 1.5% compared to the same period the previous year. Industries driving this demand are led by the transport sector followed by foil and packaging firms. Among the major drivers of demand in Africa is the food packaging industry for the production of beverage cans.

These markets are emerging due to gradual advancements in the economies leading to better living standards of the population. Research has shown that demand for material increases with increase in the nation's gross domestic product. Development leads to industrial advancement and material affluence.

There is a gradual shift from people buying products in heavy bulky bottles to purchase of conveniently canned drinks from retailers, which are light in weight and much easier to handle.

The market for these products is expected to grow by up to 7% per annum in these emerging markets. Another important factor driving the demand of aluminum is the recycling ability without loss in quality. This has allowed major manufacturers meet the recycling targets and exceed.

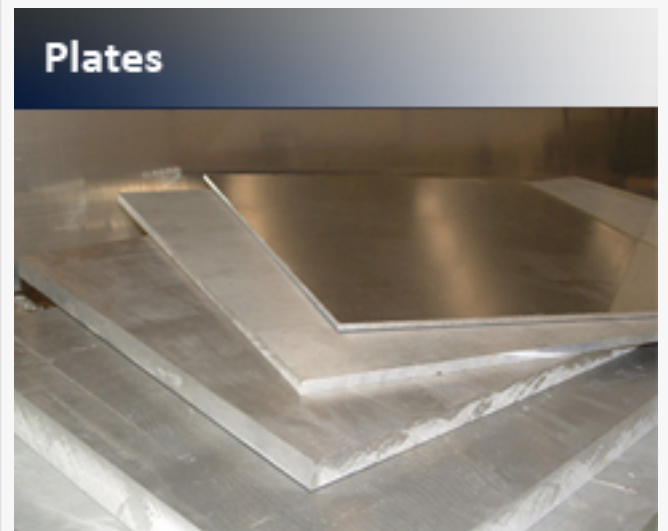

Important Quality Features Driving Demand

All aluminum products are manufactured in accordance with the good manufacturing practices code of conduct as well as following the principles of the quality management system. Important aspects considered during manufacturing include.

Strict adherence to the raw material specifications
Prevention of contamination

Aluminium Coils

Aluminium Plates

Regular quality monitoring during production process

Maintaining proper methods of storage, packaging, warehousing and transportation.

Control of sub contracted works

The range of products manufactured using aluminum is increasing by the day some include;

Aluminium Sheets are manufactured when aluminium is pressed between rollers creating a thin sheet. The sheets are 0.008 inches to 0.25 inches in thickness. This is the most widely used form of aluminium in packaging and transport sectors.

Aluminium Plates is sheet greater than 0.25 inches thickness. It has many industrial applications mainly as storage tanks for various products. Some alloys of aluminium increase in strength with decreasing temperatures.

Aluminium Extruded Profiles are useful in frames manufacture, doorways, windows and facades. They are also widely used in coolers and vehicle stators, lighting fixtures, furniture and many other applications.

Aluminium Foils is manufactured from the sheet by rolling through a continuous mill which reduces the thickness and formed to a coil at the end. They are used in manufacture of cooking utensils as well as food wrappers. Pre heated ingots are gradually reduced in thickness to form various products. Suppliers employ various processes such as casting, extrusion, forging, rod and bar, forming processes to give high quality finishes.

Purchases can be made directly from stockists and distributors of these products. Suppliers also do value addition to ensure you get the right specifications.

About Primacy Systems Pvt. Ltd.

Primacy Systems Pvt. Ltd. is a leading manufacturer, exporter & supplier, stockist and distributors of Aluminium Products includes Aluminium Sheets, Aluminium Plates, Aluminium Foils, Aluminium Coils, Aluminium Closure Stock/PP Cap Coils, Aluminium Closure PP Cap Coils, Industrial Troughed Sheets, Composite Panel Foils, Aluminium Cathode Plates as well as several other aluminium products, ferrous and non-ferrous metals, industrial rubber products, engineering plastics and material handling products in the market. The lightweight, corrosion resistant, high thermal conductivity and availability makes aluminium one of the most heavily demanded metals in the world.
