PUNE, INDIA, January 9, 2017 /EINPresswire.com/ -- [China IT Security Market](#)

IT security protects system data and information over a network. It prevents unauthorized access of data and also prevents its modification. IT security deals with the measures taken to detect, monitor, report, and counter data threats. It includes security hardware, software, and services that focuses on security of important parameters, which includes email security, data protection, compliance, web security, data loss prevention, architecture, governance, security information and event management, and identity and access. IT security has been gaining prominence over the years with an increase in data hacking activities, which cannot be addressed by traditional defense mechanisms.
