

# Tin Ceilings Can Add That Certain Atmosphere to Restaurants and Bars

*Tin ceiling can help give your restaurant or bar a distinct look. Styles range from Americana and Art Deco to Turn of the Century and Victorian designs.*

HOUSTON, TX, USA, January 10, 2017 /EINPresswire.com/ -- Today, as retail stores struggle, the food and drinking establishments are continuing to thrive in this modern world. People love good food, good drinks and good company, but most of all good atmosphere.

Restaurants and bars want to have a certain feel to them to attract the public. The decor is one of these ways and with tin ceilings being reasonably priced, they have become very attractive to new restaurant and bar owners. They are very decorative for the price and puts one back into the innocent past. People remember tin ceilings from their childhood, in the various stores. Next time you go out you may be quite surprised that your favorite places may have tin ceilings.

The design gives this restaurant the rustic look it needs.

“

Use the 2' x 2' size sheets if you are planning to use them in a suspended ceilings.”

*Glenn Eldridge*

Architects are incorporating tin ceilings in their designing of new restaurant, as well as, the renovations of old ones. Many of them are trying to bring back the old world feel into our new world. Some restaurant use tin ceilings as their standard look, such as TGI Friday's Restaurant chain, Pappas' Mexican Restaurants and most recently Black Walnut. These and many other restaurants have gotten their tin ceilings, as well as the tin cornices that can go with them from [Chelsea](#)

[Decorative Metal Company](#) out of Houston, Texas. It's a family owned business that started in New York City and uses the website [www.Tinman.com](http://www.Tinman.com)

Designers love accenting certain areas, such as on the wall behind a bar or in front of the bar where the patrons sit. The decorative designs can be found on the walls leading to the restroom or in the restrooms themselves. Many old establishments have the original tin ceilings in them and that might be where the owners, architects and designers got their ideas. The sheets are nailed on wood or glued and nailed onto sheetrock. The newest way to install them is to lay them in the grid system of a suspended ceiling, so as not to tear down an existing ceiling, but still make it look old or stylish to its surrounding.

Tin ceilings were used primarily for residential homes when they were first introduced some time

during the [Victorian](#) Era, late 1890s. Since then the ceilings have found their way in the commercial industry. Many original designs are now available from Chelsea and their styles range from Americana and Art Deco to Turn of the Century and Victorian. There are different size pattern that make if more appropriate for certain areas. High ceilings can use a 24" design, where as low ceilings can use a 12" design. Smaller spaces would use a 6" design that also makes a small area seem bigger because of the 6" repeat pattern. Most all come on 2' x 4' sheets for easy installation and the material is tin-plate steel. and are nailed up. Glenn Eldridge from Chelsea recommends using the 2' x 2' size sheets if you are planning to use them in a suspended ceilings. Also newly available are [hand-painted faux finishes](#) that are extremely beautiful.

Starting with the Victorian designs in the gay 90's, then appearing in the early 1900's are the Turn of the Century designs. After that the 1920s brought the Art Deco era and after that Americana became fashionable. There is even a Country design. Pick the time period you prefer to recreate and make tin ceilings part of that recreation. Tin ceilings, just the words themselves sound like a unique alternative.
