The cell-free DNA testing market is expected to grow steadily at a CAGR of XX% during 2015 to 2022. The factors driving the growth of this market are raising number of late pregnancies leading to high incidence rates of babies with chromosomal disorders, increasing number of life threatening cancer and infectious diseases are likely to propel the market. In addition, increasing demand for early detection through non-invasive testing procedures, healthy growth with increase in the number of deals by collaborations and acquisitions to open an array of opportunities for the market to flourish are some of the opportunities that are propelling the growth of the market. However, lack of trained health care professionals, ethical issues related to genetic testing, lack of standardization, high cost and non affordability in low- and middle-income countries, unfavourable reimbursement policies and strict legal and regulatory guidelines are hampering the growth of the market. The threats for the Cell-free DNA testing market include the availability of alternative screening methods which will impact the existing market.

The cell-free DNA testing global market is a highly competitive market and all the existing players in this market are involved in developing new and advanced assays to maintain their market shares. The major players in the cell-free DNA testing market include Berry Genomics Co. Ltd (China), BGI (China), Boreal Genomics (U.S), Guardant health, Inc(U.S), Inivata Limited (U.K), Illumina, Inc.(U.S.), Laboratory Corp. of America Holdings (U.S.), Lifecodexx AG (Germany), Natera, Inc. (U.S.), Personal Genome Diagnostics (U.S), Premaitha Health (U.K.), Quest Diagnostics (U.S.), Roche Holdings AG (Switzerland), Sequenom, Inc. (U.S.), Trovagene, Inc (U.S) etc.

The report provides an in depth market analysis of the above mentioned segments across the following regions:

- North America

- Europe
- Asia-Pacific
- Rest of the World (RoW)
