PUNE, INDIA, January 18, 2017  
/EINPresswire.com/ --

The analysts forecast the [global algorithmic trading market](#) to grow at a CAGR of 10.3% during the period 2016-2020.

Modern financial markets use advanced mathematical models to arrive at (and execute) transaction decisions. Such automated technologies are referred to as high-speed algorithmic trading. These methods determine the optimal time for an order to be placed so as to generate the least impact on stock prices. Large institutional investors use algorithmic trading technologies to buy and sell large blocks of shares in small tranches every day. These technologies allow users to use the best possible pricing without any significant impact on purchasing costs.
