[Smart Water Network](#) Market

The analysts forecast the global smart water network market to grow at a CAGR of 15.34% over the period 2014-2019.

A smart water network is a cohesive set of systems, products, and solutions that enable water utilities to remotely and continuously monitor and diagnose problems related to water distribution. Smart water networks are data-driven by information collected from the physical layers of pumps, pipes, reservoirs, and valves. The data helps optimize various aspects of a water distribution system in terms of pressure management, leak detection, water quality, and network operation. It can also reduce the overall capital expenditure of water utilities by providing real-time data based on water consumption and customer meter readings.
