

Perio Tray Named Best Product by the Dental Product Shopper

The Perio Tray, a Perio Protect prescription medical device used to treat gum disease, has been named a Best Product by the Dental Product Shopper.

SAINT LOUIS, MISSOURI, USA, February 15, 2017 /EINPresswire.com/ -- The Perio Tray, a Perio Protect prescription medical device used to treat gum disease, has been named a Best Product by the Dental Product Shopper. Each year, products are evaluated and ranked by dentists and dental hygienists based on their satisfaction with each, and the Dental Product Shopper determines the final score for each product. This year, as well as in 2013, the Perio Tray won out as a Best Product, a distinction granted by the overwhelming approval by dental professionals.

Since its approval by the FDA in 2004, the Perio Tray has become a nationwide favorite among dentists, offering a noninvasive and pain-free method for fighting gum disease. According to the Dental Product Shopper, “the Perio Protect Method is a comprehensive treatment approach to help manage biofilms associated with periodontal disease (gingivitis and periodontitis).” Perio Trays are crafted in FDA-registered labs in the United States,

“

What makes the Perio Tray effective, “is a combination of treatments, including a noninvasive chemical debriding therapy used in conjunction with traditional mechanical debriding procedures.”

where molds of patients’ mouths are sent along with detailed measurements so that Perio Trays can be individually sculpted to individual patients’ mouths. Fitted to easily administer medicine below the gum line and advance the healing process, Perio Trays are worn as frequently and for as long as is recommended on a case-by-case basis, sometimes for as little as a few minutes per day. Even with such little effort as wearing the Perio Tray for mere minutes, patients have seen and felt results each time they’ve worn their Perio Trays.

Developed by Dr. Duane Keller for his own dental patients, the Perio Protect Perio Tray was born from the desire to give

patients an alternative to treating their gum disease that would not keep them from getting treated for fear of surgery, the time it would take to heal, and the embarrassment of living with signs of gum disease even after their gums have healed. The Perio Tray has seen a plethora of commendation,

named one of Dentistry Today's Top 100 Products on for eight consecutive years since 2009, labeled one of the Top 100 Products of Distinction by the Dental Products Report in 2006, and recognized in several other publications for its unique and innovative abilities. Now that the Perio Tray, a product of Perio Protect, has become a widely used and highly recommended product, it is a staple method of treatment in thousands of dental offices across the U.S.

What makes the Perio Tray effective, according to the Dental Product Shopper, "is a combination of treatments, including a noninvasive chemical debriding therapy used in conjunction with traditional mechanical debriding procedures." The Perio Tray is a non-invasive method of treatment that is far less painful than traditional treatments. The recovery from such more invasive treatments can be a long and pain-filled process, leading many patients and dentists to turn to the Perio Tray as an alternative. With regularly scheduled cleanings and a consistent commitment to their own dental hygiene, patients who use the Perio Tray often have a quick and painless recovery from their gum disease, just as the creator of the Perio Tray intended.
