

Easy Projects Releases New Feature: Recurring Tasks

With latest update to the Easy Projects, project management solutions can now enhance overall workflow, by taking off manual labor from managers.

TORONTO, ONTARIO, CANADA, January 27, 2017 /EINPresswire.com/ -- [Easy Projects](#) has released the [Recurring Tasks](#) feature on Jan 27, 2017. The primary goal of the latest update is to take some regular manual labor off managers, and therefore improve upon existing task management processes.

At every organization, there are tasks that need to be performed repeatedly and, more often than not, at a very certain frequency. The most common example of such task would be regular team meetings. And scheduling them is another task on its own. Granted, a small, but a task nonetheless that needs to be performed by a worker. And in the machinery-like workflow of a business any interruption, caused by a human error, can lead to a potential disruption in scheduling and time delays, which in turn often lead to revenue losses.

So in order to minimize the risk associated with routine scheduling of repeating tasks, Easy Projects has introduced the newest feature to project management platform – Recurring Tasks. Now the users can easily set up, track and manage responsibilities that occur on a regular basis. The feature is simple in execution, all that is required is to open Activity Details page, then click on More Options and after that click on the Repeat button. Next, the user will see the setup menu, where he or she will be able to pick the recurrence parameters such as:

Frequency
Start Period
End Period

Just like it would be expected, the created recurring tasks also keep attributes of the original tasks. So all the custom fields created prior, or any attachment will be carried over to the new entity. The Recurring Tasks feature may simply look like a minor change that does not carry crucial benefit. However, such updates to the software bring incremental changes to individual users, and when added up can outweigh some major feature release in the field of usefulness on a corporate scale. The team behind Easy Project is proud of the accomplishments that they have achieved in the years the PM software exists. And in just over the few past years, Easy Projects has seen a dramatic increase in its customer base and the platform has become a well-recognized player in the industry.

About Easy Projects and Logic Software Inc.:

Easy Projects is a cloud-based project management platform designed to meet the demands of various companies that may vary in both size and industry domain. The PM software is extremely customizable and scalable, which makes it an ultimate solution for an organization of any type.
