

# HoverBoard Creator Invents Human Transport Device . It's Amazing.

*The Solowheel Iota is a super-compact, self-balancing, personal electric vehicle.*

CAMAS, WA, USA, February 1, 2017  
/EINPresswire.com/ -- Last week Inventist launched the Solowheel Iota via Kickstarter. The Iota is developed by the creator of the original Hovertrax hoverboard. The Solowheel Iota is a super-compact, self-balancing, personal electric vehicle.

Based on the larger Solowheel design, Iota gives riders unprecedented freedom to move and travel in any direction effortlessly. Engineered with a unique parallelogram-based turning assist mechanism and an intelligent rider detection system, Iota remains balanced and stable for everyone to cruise with confidence. Plus, the Iota only weighs 8 lbs. - so it can be carried and stored anywhere when not in use.

Solowheel Iota will include Bluetooth capabilities (for watch and smartphone apps), an 8-mile range on a single charge and a cool suspension system is in the works.

Solowheel reached its funding goal in just 3 days on Kickstarter. It's now super funding with over \$100,000!
