

Introducing New, Affordable VoIP Communications and Data Management Tools for Flower Shop Owners of All Sizes

Learn how to be a successful florist owner with better and low cost communications and data managements tools, brought to the market by TieTechnology.

TAMPA, FLORIDA, UNITED STATES, April 9, 2017 /EINPresswire.com/ -- Floral companies can now take advantage of the [best VoIP phone systems for small businesses](#), thanks to TieTechnology. In recent years, voice over internet protocol, or VoIP, has improved and offered businesses the ability to do more at a lower cost. Using the speed and reach of the internet, companies of all sizes can take their communications experience to new heights. VoIP provides businesses with many advantages, like the following:

Enjoy Better Calling Rates

Call Reporting, Call Tracking
with Floral Prodigy”
TieTechnology.com

TieTechnology, a leading communications provider, offers the highest quality, low cost, [flower shop business network](#) available on the market today. Unlike traditional PBX or private branch exchange, VoIP doesn't rely on seriously dated infrastructure. Instead, it sends data in small packets and super high speeds. This reduces latency and improves call quality. Also, international calls and long distance calls are a fraction of the price of traditional phone service.

No Expensive Extras to Buy

There's no need to purchase additional equipment hardware or software programs. That's because we integrate with floral systems like [RTI, Dove, Mercury, MAS and Floral Prodigy](#). With voice over internet protocol, businesses can use existing equipment and systems already in-place. This allows for a seamless transition and reduces any downtime substantially. Traditional telephony is very expensive to maintain and the time and costs associated with it are much higher than VoIP.

Give Customers Improved Experience

Customers want to speak on-demand through live calls at any time. Customers will enjoy being able to place and check orders when it's convenient for them. What's more, VoIP offers some key training features, including call monitoring, call recording, call routing, and a "barge-in" option for owners and managers. These are invaluable tools for businesses to help facilitate better training and improving customer service.

Allow More Key Collaborations

When delivery drivers are in the field, vendors are coming and going, and customers are calling, VoIP delivers in a way traditional telephone service cannot. With these enterprise communication solution tools in-place, companies can foster better collaboration between all parties. This not only helps to deliver more accurate orders but also, assists in improving productivity.

Setup and Manage Systems Easily

Unlike traditional PBX telephone hardware and equipment, VoIP requires no special technical skills to setup and manage. Practically anyone can setup and configure a VoIP system, customizing to their business' needs. Plus, it's easy to access and manage all forms of communication: texts, email, fax, voicemail, chat sessions, instant messages, and more from one simple to use interface.
