

Teleflora's Announces How Floral Prodigy Is Used By Flower Shops For Call Tracking and Call Reporting by TieTechnology

Learn some clever ways a flower store owner can cut communications costs while boosting productivity and profits, courtesy of TieTechnology.

TAMPA, FLORIDA, UNITED STATES, May 7, 2017 /EINPresswire.com/ -- TieTechnology, the [best floral VoIP phone company](#) is revealing how businesses can be more successful with their communications. VoIP, or voice over internet protocol, offers exceptional quality at a lower price than traditional phone service. Its many benefits include the following:

Great Call Quality through Better Technology

TieTechnology provides the [best VoIP phone systems for floral shop owners](#). Its systems are far superior to traditional phone service, something that's based on an invention of the late 1800's.

TieTechnology offer's businesses the power to do more in less time."

TieTechnology.com

Because traditional telephony relies on old infrastructure and equipment, it's routed through PBX, or, private branch exchange. Calls utilizing VoIP are sent in compressed data packets at high speeds over the internet. This reduces latency and improves call quality. Also, because it's so much faster, it costs less for long distance and international calls.

Simple Integration with Existing Systems

Unlike traditional phone equipment, VoIP seamlessly plugs into existing software and equipment. We integrate with floral systems like [RTI, Dove, Mercury, MAS and Floral Prodigy](#). That greatly lessens any downtime when businesses make the smart switch from traditional phone services to VoIP. Therefore, no extra costs exist, making this enterprise communication system even more attractive.

Easy to Setup and Configure

With traditional telephony, equipment is bulky and complicated. It requires an expensive technician to

setup and configure. Also, downtime during setup and configuration, is substantial, costing businesses more in lost productivity. VoIP is simple to setup and configure and can be done with very little effort. Because of this, VoIP is portable, simple to relocate whenever a business moves from one retail store or office to another.

Manage Communications in One Location

VoIP gives businesses the power to do a lot more in less time. All business communications can be readily accessed and managed from one interface. This includes email, voicemail, fax, instant messages, chat sessions, and texts. With such flexibility, companies spend less time hunting and more time on getting things done.

Manage Features, Extensions, and Phone Numbers

Another big advantage VoIP offers are the ability to manage a robust suite of features, extensions, and phone numbers. Call features, such as call waiting, call forwarding, call routing, call recording, call monitoring, call blocking, and many more, can be activated or deactivated in no time. Moreover, extensions can be created or deleted on-demand, as well as phone numbers. This is great for scalability, either up or down, and, also provides the availability to establish phone numbers in different area codes to create a local presence.
