DigitalPhone.io Launches iOS and Android Softphone App to Extend VoIP Service and Functionality

Leading hosted telecommunications firm DigitalPhone.io announced today that it has launched a free new softphone app for iOS and Android smartphones.

GREENSBORO, NC, US, February 14, 2017 /EINPresswire.com/ -- Leading hosted telecommunications firm DigitalPhone.io announced today that it has launched a free new softphone app for Apple IOS and Android smartphones, which enables customers to expand VoIP service and functionality beyond their desk phone or landline.

DigitalPhone.io

> "Our development team worked very hard to ensure that the app met our standards, and our customers' expectations for functionality, versatility, integration, compatibility and ease-of-use."
>
> *Nicky Smith*

The new app installs quickly and easily, and supports the advanced unified calling (UC) features of DigitalPhone.io's network. End users maintain the same identify when making and receiving calls from any location regardless of device, and have full management control over various customizations, configurations and calling options (e.g. mute, hold, transfer, add call, speaker, etc.).

In addition, since the app is fully and automatically integrated with DigitalPhone.io's network, end users can switch from one device to another without interrupting a live call. For example, they can answer or initiate a call on their desk phone, and then seamlessly transfer it to their smartphone if they need to leave the office.

Other key features of DigitalPhone.io's new softphone app include:

- A streamlined, clutter-free interface
- Easy-to-use dial pad that is ideal for devices with small screen sizes
- Voicemail indicator with details (name/number of caller, time of call, length of message)
- Full list of contacts (app and phone)
- Complete call history (made and missed)
- Answering rules

Commented Nicky Smith, DigitalPhone.io's CEO: "Our development team worked very hard to ensure that the app met our standards -- and our customers' expectations -- for functionality, versatility, integration, compatibility and ease-of-use. The feedback we have received so far has been extremely positive, and we look forward to enhancing the app with more features and tools in the future."
