*Market Research Future*

Technological improvement coupled with growing clothing demand is allowing manufacturers to offer exceptional marketing points such as stain-resistance, wrinkle-resistance, soft finish and antimicrobial properties to provide enhanced performance and comfort to customers. Moreover, increasing consumer spending towards high quality products especially in Canada and Mexico is

anticipated to positively influence the industry over the forecast period.

The products comprise wetting agents, emulsifiers, dispersants, detergents, chelating agents, and biocide active ingredients. Growing environment concern regarding the adverse effects of these chemicals may emerge as a major barrier to the overall market development.

Contaminated water and water shortages caused by an intensive fabric industry may have extensive local consequences in the manufacturing countries. Stringent environmental regulation such as Integrated Pollution Prevention and Control (IPPC) along with Emission Trading System (ETS) and regulation on registration, evaluation, authorization and restriction of chemicals is expected to hinder growth.
