## "

This new patent is the second granted to Sureline Systems with additional patents pending, and shows our commitment to bringing innovative technology to the evolving IT infrastructure around Cloud"

Ravi Goel, Co-founder, President and CEO Sureline Systems Inc

## Patent Abstract

In one embodiment, a computer-implemented method includes the step of communicatively coupling with an application-server local area network (LAN). The physical servers are discovered in the application-server LAN. The applications running in one or more physical servers in the application-server LAN are discovered. The application data and the application metadata are captured. The application data and the application metadata are parsed. The unique data blocks of the application data and the application metadata are identified. The unique data blocks are uploaded to a cloud-computing platform. It is determined that the one or more physical servers running the application data and the application metadata is no longer available in the application-server LAN. A cloud-based appliance in the cloud-computing

platform is placed in an operational state. An application associated with the application data and the application metadata is identified and activated in the cloud such that there is continuous availability of the application and its data.

"This new patent is the second granted to Sureline Systems with additional patents pending, and shows our commitment to bringing innovative technology to the evolving IT infrastructure around Cloud," says Ravi Goyal, Co-founder, President and CEO of Sureline. "There is a growing interest in moving enterprise applications and workloads across Clouds and on-prem data centers transparently.

Sureline's SUREedge, based on innovative and patented technology, offers enterprise class software solutions for application mobility."

## About Sureline Systems

Sureline's patented and award winning SUREedge® is a proven enterprise-class software solution for Cloud Migration, Cloud Disaster Recovery, Datacenter Consolidation and Application Mobility. SUREedge reduces risk through encrypted and efficient data transmission, and reliable transformation of the entire application, its data and interdependencies from source server to the target server virtualization or Cloud. It is easy-to- deploy and manage through a single UI, with automated discovery, no agents to install, and is completely non-disruptive. SUREedge is source and destination agnostic working to/from any physical server, any hypervisor (including hyperconverged infrastructures), any cloud, and any storage. Customers worldwide trust SUREedge to meet their workload migration, disaster recovery and application mobility objectives. Sureline is headquartered in San Jose, CA., and its products and services are available through a global network of partners.
