Environmental Holdings, LLC (Cascade), the leading provider of environmental and geotechnical drilling, high resolution site characterization, and in situ remediation applications is pleased to announce the acquisition of In Situ Thermal Remediation (ISTR) technology provider Global Remediation Solutions, Inc. (GRS).

The GRS smart ERH technology coupled with our large fleet of treatment systems and process engineering capability is unique among thermal vendors”

*John Bierschenk, President
and Co-founder of
TerraTherm*

GRS is one of a limited number of ISTR providers in North America specializing in Electrical Resistance Heating ([ERH](#)) technology. The experienced team of engineers, project managers and field technicians have been designing, installing and operating effective remediation solutions targeting the most challenging site conditions and recalcitrant contaminants for decades.

The newly acquired group will operate under [TerraTherm, Inc.](#), a subsidiary of Cascade Environmental. TerraTherm is the worldwide leader in the development and implementation of in situ and on_site thermal remediation of contaminated soil and groundwater. The acquisition of GRS strengthens

TerraTherm’s market position as the only thermal vendor offering all mainstream ISTR technologies in-house.

“The GRS team brings extensive ERH remediation experience to TerraTherm. The GRS smart ERH technology coupled with our large fleet of treatment systems and process engineering capability is unique among thermal vendors,” says John Bierschenk, President and Co-founder of TerraTherm. Headquartered in the Pacific Northwest, GRS adds capacity to a currently underserved geography for TerraTherm. “We are extremely pleased to welcome GRS to our team. Their well-known attention to client service and collaboration aligns with our service model,” says Bierschenk.

TerraTherm will take on GRS’ ongoing projects along with their entire technical team. Terms of the agreement were not disclosed.
