

# Space Key - key to an Audiophile Experience

*World's first USB stick designed DAC with native DSD256 support.*

GARVAGH, UNITED KINGDOM, March 7, 2017 /EINPresswire.com/ -- Do you want to play back high def audio files like DSD (Direct Stream Digital) PCM (Pulse Code Modulation) or DXD (Digital eXtreme Definition) up to 384 kHz 32 bit, however you don't want to spend a fortune on a high end BD/SACD player? Would you prefer to listen to your music collection from your laptop, gaming console, tablet or even your smartphone? Space Plus DAC is the ideal solution for you! Plug it in to the USB port, and get ready to experience the highest quality sound technology can offer you.

The Space Key has the form of a small USB key in an elegant plastic case made by Hammond. On the top it has an OLED display with a resolution of 128 by 64 pixels, where you can see information about the format which is played back by the DAC at the moment. On the side it has a volume rocker, which can be also pushed to mute the audio. On one end it has a USB type A connector, and on the opposite end is a 3.5mm jack socket.

Thanks to the small size (78x30x16mm) the product is ideal for mobile use with smartphones, tablets and laptops, but it can be used with any other computer as well, as long as it has support for USB audio devices.

The heart of the Space Key is a DAC chip by ESS®, well-known among audiophiles because of their high quality digital to analog converters. The other very important component is the eight core XMOS USB High-Definition Audio Processor running at 8x500MHz which ensures high and precise data rates through USB 2.0 for the highest possible quality of the digital audio signals.

Nowadays they have a live campaign for this product on famous startup page [Kickstarter.com](https://www.kickstarter.com). It looks like this campaign will be again successfully funded as their early campaigns. The Kickstarter campaign is officially open until April 11, 2017.
