

# Capital Corp Merchant Banking Approves \$18M California Biodiesel Production Project

*The facility will produce biodiesel as well as glycerin by-product as it is in high demand for commercial use.*

ORLANDO, FLORIDA, UNITED STATES, March 7, 2017 /EINPresswire.com/ -- This environmentally-friendly \$18 million project brings state-of-the-art production technology with demand for ever cleaner-burning fuels. The facility will be able to process multiple feedstocks of any quality level and turn it into B-100 biodiesel, which is 100% pure biodiesel. A by-product of the biodiesel manufacturing process is glycerol, which, once treated, becomes glycerin that is used widely across numerous industries, including the beauty and cosmetics industry. Converting this by-product will mean less waste production as the facility will be re-using and treating its glycerol by-product toward a meaningful end.

Biodiesel is a clean burning biofuel produced from biomass such as seed oils, animal fats, waste vegetable oil, and algal oil. Biodiesel can be used as a fuel for vehicles in its pure form, but is usually used as a diesel additive to reduce levels of particulates, carbon monoxide, and hydrocarbons from diesel-powered vehicles.

Although biofuels account for a very small share in the global energy scenario, they are fast growing to become a prominent alternative energy resource in future. A steady 11% growth rate is predicted by industry experts for the global biofuel consumption through 2020, reaching a total of 58 billion gallons by the end of that year. Currently the US leads global biofuel production with a share of about 42.8%, with Brazil in second place.
