

# Android Open Source Project (AOSP) offered for custom ROM development on AWS Marketplace

*AOSP is now available in Hardware Virtual Machine (HVM) with a free trial for all instance regions on Amazon's web series.*

HARTFORD, CONN, USA, March 14, 2017 /EINPresswire.com/ -- [Code Creator](#), a leading Connecticut-based high tech software company announced the expansion of regions for the Android server available on the [AWS Marketplace](#), which provides a convenient, fast way to locate, purchase and immediately start using application services on the Amazon Web Services (AWS) cloud.

Android is the leading, open source, Linux-based operating system that powers millions of devices including smart phones, tablets, home appliances, vehicle systems, and more. The Android "ROM" is the Android operating system. This is the User interface (Sense UI in HTC phones) and the file system for maintaining contacts etc. It is composed of a Linux kernel and various add-ons to achieve specific functionality.

Code Creator's [AOSP](#) ROM Builder is a full-featured Android Build environment, pre-configured with all the software needed to build the Android Open Source Project, create custom ROMs, or just build for one of the included devices. The server also contains the AWS Command Line Interface (CLI) tool to easily copy an AOSP image to Amazon S3 once compiled. Harness the power of AWS by launching a high CPU core instance and build Android in record time.

Compiling custom Android ROMs, modifying Android's core framework or enhancing the default user interface has never been easier and faster thanks to Code Creator's cloud based ROM builder.

For a free trial visit:
