The strong growth in carbon black industry is driven by the surging demand from tire and rubber industries. Emerging shift from commodity black to more specialized grade carbon black is projected to have a positive impact on the overall market growth.

Although, commodity carbon black holds the major percentage share in the total carbon black demand, specialty black is projected to display a faster growth in the future. Among the regions, APAC holds the largest market share mainly due to pouring number of vehicle production and

shift of tire companies in low-cost countries in the region.
