

Weston Center Offers Special Savings on the Patented Weston System Hair Loss Restoration

The World's Only Patented Scalp Micropigmentation

MIAMI, FLORIDA, USA, April 19, 2017 /EINPresswire.com/ -- To kickoff the expansion of the M. Weston Non-Surgical Hair Restoration Centers, [Mark Weston](#), the owner and developer of the world's only patented [scalp micropigmentation](#), will offer his personal services to a limited number of clients in Florida. And to prove [The Weston System®](#) is the world's best, Corporate is offering \$500 towards the cost of this procedure to hair loss residents in Florida.

One Appointment Only; No Multi-Sessions

After dozens of telephone calls and emails from disappointed recipients of the “multi-session” methods, Weston has decided to open his calendar to additional clients in Florida on a first-come first-

served basis. Multi-session providers can require anywhere from three to nine sessions to complete the micropigmentation and costs a minimum of \$1500 more and only lasts one to five years. These multi-session methods can also take up to 6 to 8 weeks to complete. To dissuade customers from opting for these multi-session methods, Weston is offering \$500 towards the cost of The Weston System to prove the superiority of his method. This will give a wider range of customers the opportunity to receive the only one-time, one appointment only permanent scalp micropigmentation method applied personally by the developer of this concept in the United States. Total savings can be as high as \$2000 if customers chose The Weston

“

I had eight multi-sessions from a Miami provider with zero results as my scalp micropigmentation faded away each time. I had the one appointment Weston System and the results exceeded my expectations.”

Carl C.

System® over the multi-session methods.

What is The Weston System®?

The Weston System®, offers the world's only patented, one-day, permanent scalp tattooing method for hair loss. The Weston System® is a technologically-advanced hybrid medical tattooing method that mimics lost follicular hair units on the scalp for men and women suffering from hair loss. This System is comprised of patented needles, proprietary equipment and pigments, as well as a specific methodology for application. Developed as a one-time permanent application that naturally blends with any hair color and skin tone, this System is applied on the male client with a close buzz cut, blending the replicated follicles into the client's remaining hair. For women, the same application

method is used as a camouflage of thinning areas of the scalp.

Weston, was the first in the world to aggressively research, engineer and develop a tattoo needle specifically for duplicating a hair follicular unit and the specific pigmentation application method to the scalp. Weston filed a patent application for his needle and method in 2009 and the USPTO approved and issued the final patent in July of 2015. Since that time, Weston has turned the hair loss industry on its head.

Since Weston's unveiling of this system in 2009, hundreds of copycat providers have emerged attempting to emulate Weston's natural look. No other company has developed specific equipment, pigments nor needles for their applications, and none are patented as The Weston System®. Weston's unique system is the first and only in the world of its kind developed as a one-time, one-appointment only permanent application.

The Weston System® is a superior and permanent solution to hair loss that is non-surgical, produces immediate results, is virtually pain-free, requires no recuperation time, maintenance free is and less expensive than hair transplants.

M. Weston Non-Surgical Hair Restoration Centers are presently located in Florida and Maryland with several more opening in the next few months.

Weston is available for interview upon request.
