- Gemalto
- Giesecke & Devrient
- Infineon Technologies
- Safran Identity & Security
- Oberthur Technologies

## Covered in this report

The report covers the present scenario and the growth prospects of the global e-passport market for 2017-2021. To calculate the market size, the report considers the revenue generated from hardware, software, and services segments to calculate the market size.

Commenting on the report are : E-passports are used to authenticate the identity of a traveler during international travels. This technology stores data about the traveler on a smart chip, which bears a unique identification number, and a digital signature. It is more secure than traditional paper technology as it cuts down the risk of data alteration and duplication. The data stored electronically on the chip is authenticated by public key infrastructure (PKI), which helps eliminate forgeries. Facial, fingerprint, and iris recognition are the major biometric modalities used in the technology.
