PUNE, MAHARASHTRA, INDIA, April 12, 2017 /EINPresswire.com/ -- Market Highlights

Holography is the science of making holograms. A hologram is a photographic recording of a light field, rather than of an image formed by a lens, and is used to display a fully three-dimensional image of the holographed subject.

Holography accurately reconstructs the wave front reflected by an object, resulting in a replicated object floating in midair. The holographic image optically reconstructs reality and therefore the 3D holographic image is ultra-realistic.
