About Liquid Macrofiltration

The heavy-duty end of the filtration business is liquid macrofiltration, which covers the efficiency range between screens and membranes. Liquid macrofiltration deals with large quantities of solids. Therefore, the specific equipment in this segment (belt presses, sand filters, leaf filters, filter presses, gravity belt filters, and bag filters) are rugged and large. They are used in the mining, chemical, municipal water and wastewater plants, and other industries, where solid/liquid separation is required.

The analysts forecast the global liquid macrofiltration market to grow at a CAGR of 4.83% during the period 2017-2021.
