

IT Governance announces updated version of its PCI DSS staff awareness e-learning course

ELY, CAMBRIDGESHIRE, UNITED KINGDOM, April 21, 2017 /EINPresswire.com/ -- IT Governance, the global provider of information security solutions and compliance expertise is delighted to announce the launch of its updated [PCI DSS staff awareness e-learning course](#).

The new [PCI DSS v3.2 staff awareness e-learning course](#) is designed to increase employees' awareness of PCI DSS requirements and the Standard's impact on daily business activities.

Every organisation that processes, transmits or stores payment card data must comply with the PCI DSS, and failure to comply with its requirements can result in heavy fines and security vulnerabilities.

Alan Calder, the founder and chief executive officer of IT Governance, said: "The new version of the PCI DSS staff awareness e-learning course provides a systematic, consistent and repeatable approach to training new and existing employees. The course is designed to help organisations reduce data breaches caused by human error, and automatically records which staff have completed it to help you effortlessly monitor your PCI DSS compliance status."

The e-learning course content includes an introduction to the PCI DSS, the definitions required to understand the Standard's requirements, and an explanation of cardholder account data and sensitive authentication data. The course also covers the PCI DSS requirements and various PCI DSS application scenarios to test the learner's understanding of the Standard.

People who take the 45-minute e-learning course are presented with a test, which comprises 20 random questions (from a bank of 36) and has a pass mark of 75%. Upon completing the course, employees are awarded a printable certificate.

The staff awareness course is one of IT Governance's PCI DSS compliance solutions. IT Governance covers the entire range of payment card compliance services, such as PCI gap analysis and scoping, PCI DSS penetration testing, PCI DSS documentation toolkit, compliance audit and ROC, validation and SAQ completion, as well as maintenance and consultancy.
