

# Interlink Uses Cloud Technology for Mergers & Acquisitions

*Interlink Cloud Advisors uses cloud technology to utilize the speed and scalability of integration, as well as other processes during mergers and acquisitions.*

CINCINNATI, OH, USA, April 24, 2017 /EINPresswire.com/ -- Mergers & Acquisitions are beneficial for companies, employees, and the public, but only when the two companies can integrate with less potential hiccups and setbacks that traditional software can cause. [Interlink Cloud Advisors](#), a Cincinnati-based advisory company, uses [cloud technology](#) to facilitate smooth and quick integration with less downtime.

The consultants at Interlink have discovered, with years in the [Mergers & Acquisitions industry](#), that cloud technology is beneficial to businesses for several reasons:

\_Collaboration – Cloud technology is available on any device connected to the internet, which allows stakeholders, groups, and others to stay connected no matter where they go.

\_Subscription-Based Services – Companies can pick and choose the services they need, which means they get a custom solution that fits their needs and their budgets.

\_Uptime – Thanks to cloud services, it's possible to integrate two or more companies without disrupting ongoing operations.

\_Future Planning – The technology allows businesses to prepare themselves for opportunities in the future, including further mergers and acquisitions.

\_Planning for acquisitions becomes simpler in the cloud, while you no longer have to worry about having the right computing power – just license what is needed, when you need it.

\_Simplification – Finally, cloud technology allows businesses to integrate with new processes seamlessly, allowing IT departments to focus on their priorities, and improve their efficiency.

Interlink provides a variety of services designed to help their clients discover which types of software they need, while keeping their budgets in mind. This allows business owners and their IT departments to focus on operations, rather than the integration of platforms, systems, and services.
