Description

According to StatisticsMRC, the Global Crop Protection Chemicals market is estimated at \$52.21 billion in 2015 and is expected to reach \$85 billion by 2022 growing at a CAGR of 7.21% from 2015 to 2022. Due to the expanding population globally the demand for food is rising which in turn is fueling several market sectors in the agriculture industry. That type of market is crop protection chemicals, which consists of different crop chemicals to increase agricultural yield. Rising demand per hectare yield and increasing demand for food that is free from harmful organisms is boosting the global crop protection chemicals market. Some of the major challenges which the Crop Protection Chemicals market will face are increasing resistance of pests to crop chemicals, the ban imposed by market regulators, unfavourable effects of these chemicals on people's health, extinction of rare beneficial species due to the use of crop chemicals, etc.

Herbicides are most widely used and are expected to be the fastest-growing types in the coming couple of years. This is mainly due to the high usage of herbicides for removing out various herbs and useless weeds to reduce the crop loss. The oilseeds & cereals segment is projected to be the fastest growing market in the upcoming years. Increasing demand for cereals & oilseeds and high crop loss mainly due to unsafe herbs and weeds are forcing the market for crop protection chemicals used on cereals & oilseeds.
