About Surface-To-Air Missiles

The use of surface-based missiles to engage planes and defend the air space has evolved considerably in the last couple of decades. A surface-to-air missile is a high-speed missile launched from the ground to intercept aircraft, helicopters, as well as other ballistic and cruise missiles. Surface-to-air missile are designed to have high acceleration and a small warhead, and are usually guided by radar or infrared (IR). One of the core components of functioning of a surface-to-air missile is the radar that helps in tracking and guiding the missile toward the target.

The analysts forecast the global surface-to-air missiles market to grow at a CAGR of 4.80% during the period 2017-2021.
