The grains segment dominated the market in 2015 and is anticipated to continue its market dominance until the end of 2020. Wheat and rice segment constitute the significant share as they are the staple food for millions of people. Growing demand for rice is more in countries and regions with low income, where carbohydrates at economical rates are still the primary need of consumers to meet energy requirements. The consumption of meat and dairy products is increasing owing to factors such as high disposable income, increasing urbanization, and changing consumption patterns. In China, the demand for pork is likely to increase. In Argentina and Brazil, the demand for beef is anticipated to grow rapidly over the next five years. The consumption of beef is anticipated to increase by 68 million tons by 2030. This would lead to the development of agribusiness companies involved in primary production as well as livestock breeding and feed.
