

# Full Body PhotoBioModulation (LED) Bed starts second round of testing in June

*Polychromatic Full Body PhotoBioModulation (LED Therapy) bed to launches June 2017.*

SAN CLEMENTE, CALIFORNIA, UNITED STATES, May 9, 2017 /EINPresswire.com/ -- New Polychromatic [Photobiomodulation Chamber \(LED Bed\)](#) starting next round of research:

Does your Medical, Chiropractic or Cryotherapy practice deal with pain, performance or recovery?

PhotoBioModulation (PBM) has studied for over 2 decades presenting over 400 studies across a wide swath of treatment verticals, with a general research based conclusion that PBM can help reduce pain and recover from injury.

The ARRC LED is inviting medical professionals and sports recovery centers to engage in testing of a powerful new polychromatic, [full body LED Light Therapy bed](#) in June of 2017.

“

We are seeing incredible outcomes with our first round testing Red/IR and are excited about the prospect of combining 5 different wavelengths into a powerful full body PBM system with a pulse.”

*Mike McIntyre*

The new system will nearly double the power of the ARRC's first chamber called the EDGE, and increase the wavelength distribution from 2 to 5 active wavelengths delivered with a pulse.

Feedback from early testers of the EDGE has exceeded expectations for wellness and performance enhancement. The question the ARRC LED is asking is, what will be the response of an increase in power distributed among 5 wavelengths instead of two – all activated at the same time.

PBM seems to affect the cells by (1) increasing cellular energy (2) detoxification of waste and free radicals (3) increasing both circulation and quality of blood flow. These cellular benefits cascade down into the tissues, organs and systems creating 'positive benefits for nearly every part of the body' [1]

Eight new facilities will be invited to participate in this study. The intention is to reach out to medical centers that deal with pain clients and athletic recovery centers (Cryotherapy and sports medicine) that deal with recovery from competition or intense training.

The benefit curve seems to cross over from wellness, into athletic performance, aesthetics and cognitive function.

Below are some of the more common feedback points from early system testers with a 3 wavelength, mid dose synchronized delivery system.

The FDA has not yet evaluated these statements. The results may not be typical for any person or condition. The ARRC LED makes no claims as to the benefits of the system if any at all.

“With Cryotherapy my clients are feeling better fast, with the EDGE they are getting better. Diabetic subjects have responded with substantially lower blood sugar.” Another subject with neuropathy reported being “able to feel the difference between a carpet and wood floor for the first time in years.”

“My energy levels are crazy, my training partners think I am on steroids”, and “I can work out twice a day and not get sore.” “I did a triple at my personal best on the squat without even training”, and “my subject’s bench press went up 35 pounds after two sessions.”

“Women are raving about the system. My skin (hair) has never looked better’ is a common response from users.”

**BECOME A TESTING PARTNER** Testing partners receive the machine at a greatly reduced price per research regulations. If you have a practice that deals in pain relief and restorative or athletic recovery, this can be a great opportunity to get into the emerging full body PBM market for a fraction of market price. The ARRC LED is seeking partners that may reach out into athletic recovery, cryotherapy, chiropractic, arthritis, diabetes/neuropathy, wound healing and surgical recovery verticals. You can learn more at <https://ARRCLEd.com/IRBResearcher>

**PARTICIPATE IN THE STUDY** If you are experiencing pain or you are an athlete seeking improved recovery or performance, you would be able to receive treatments at a substantially reduced cost across the 12 week treatment period. You can learn more at <https://ARRCLEd.com/IRBSubject>

The FDA has not yet evaluated these statements. The results may not be typical for any person or condition. The ARRC LED makes no claims as to the benefits of the system if any at all.
