# ITFirms.co Power Rankings: Who got better, and on top, this month

ITFirms.co announces its new rankings for the various categories in IT services provided by globally recognized development agencies.

NEW YORK, NY, UNITED STATES, May 15, 2017 /EINPresswire.com/ -- The global research and review firm, ITFirms.co today released its new rankings for top companies providing high-quality IT services across the world. The rankings identify the top-performing agencies that have delivered outstanding projects in the digital landscape to various startups, enterprises, small-medium business groups and innovative brands, for the year 2017.

The rankings are a result of ITFirms' ongoing research into best full-service digital services agencies across a multitude of sectors and regions. From web design and mobile app development to digital strategy and app prototyping, ITFirms.co handpicks every provider and scrutinize it further for the best results.

The evaluation process demands eagle eye, and expert analysis (from a modern tool) as the companies are judged on critical factors like quality of end-product, seasoned developers, expertise, experience, client testimonials, client reviews, clean code, optimized content, adherence to timelines and budget limitations, affordable costs, project development strategy, agile, adaptive approach and communication with the team. The companies that pass the minimum criteria on the scale are arranged in the list as per their total scores on all the mentioned parameters.

ITFirms conducts an extensive research and the process involves a transparent ranking mythology

powered by an algorithm rather than human intervention.

The rankings detail more important differentiators which ITFirms.co believes will change the ratings and rankings for the benefit of the clients and their customers.

While the lists shuffle every few months, there are few names that are ubiquitous. They may get shuffled among themselves but have remain in the top positions consistently. July Rapid, Konstant Infosolutions, Cleveroad, Tech Ahead, WillowTree, Intellectsoft, OpenXcell are a few to mention.

Interestingly, there are some new names that have moved up in the list of [top 10 cross-platform app development companies](#), [top mobile app development companies](#), [top enterprise development companies](#), top web and eCommerce development firms for 2017. Some of them are Ethervision, Affle Appstudioz, Fingent Technologies, RapidOps Inc, Softeq, Noto Solutions, SumatoSoft, Magic Logix, Maxburst, Huemor Designs.

As businesses and enterprises realize the need of digital services in this on-demand, mobile-first economy, ITfirms.co makes it a lot easy for them to choose the single best from the world that meets their business needs and perfectly caters to their idea to serve a real-life purpose.

Commenting on this, the CEO at Konstant Infosolutions expressed his gratitude (to be considered as a top app and web developer) and congratulated the whole team of ITFirms.co for doing such a commendable job, helping businesses find out an excellent team for the development of their applications, websites and enterprise software. He also remarked, "It's such an honor and pleasure for all the app development agencies and IT services provider like many of us to get the right leads and add many more potential clients to our list."
The experts at ITFirms.co also focus on the market presence and client interviews, which heavily influence their ratings and rankings in the leadership matrix
