The subsea refers to the processes, technology, method or equipment that are used in the oil industry/ employed in undersea geology, under water mining, offshore oil and gas developments, etc. In the oil & gas industry, subsea relates to the drilling, exploration and development of oil & gas fields in underwater locations at shallow and deep water level. The subsea equipment market can be divided into four different sectors: the SURF, the subsea trees, the manifolds and the subsea control module system.
