PUNE, MAHARASHTRA, INDIA, May 25, 2017 /EINPresswire.com/ -- Carpule is a type of ampule or cartridge containing liquid medicine to be inserted using a syringe. It has a puncturable cap and one end and a sliding plug on the other end. In dental profession, dental cartridges are known as carpules. The dental carpules are mainly used in medical environment like Dental clinics, Hospitals, home care, etc. These dental carpules contain various solutions like Local anesthetic drug, Sodium chloride, sterile water, Vasopressor, Sodium bisulfite, Methylparaben and many others. The carpules can hold up to 2.2 ml of solution and can be increased depending upon the requirement. The dental carpules ensures efficiency by reducing the risk of air entrapment, thus safe and clean application. These are either made of glass or plastics. Recently, most of the local anesthesia manufacturers have started manufacturing plastic cartridges. They have a number of disadvantages over glass cartridges such as force required to be applied to the plunger of the syringe, leakage of solution during injection and the plunger does not glide down the plastic cartridge as it does in the glass cartridge.
