Scope

- The European wear and tear market has seen volumes fall in recent years, as the effects of the recession and subsequent European scrap page schemes have rippled through the aftermarket.
- Overall values also suffered over the same period. That has now started to change. The exhaust system market has started to show an increase in volume, growing by 2.2% between 2012 and 2016.
- The catalytic converter market has also declined in volumes, being affected by reduced quantities of precious metals within them, which influences their longevity; the overall market has declined by 1.8% between 2012 - 2016. Brake part volumes are increasingly influenced by the improvements in friction materials that have been made, increasing lifespans and reducing replacement rates.
- The brake discs market increased by 7.0%, brake drums by 9.3%, brake pads by 4.5% and brake shoes by 8.2%.
- The shock absorbers market has also seen an increase in volumes sold, growing by 8.5%, while the starter batteries market has grown by 5.5%. Finally, the windscreen wipers market has grown by 5.0%.
- In many ways this has been influenced by the strong upturn in the European new cars market, which has seen the number of new registrations grow strongly year on year.
- This report provides an overview of the major issues currently affecting wear and tear parts in the European aftermarket.
