

Still the best way to protect your data from ransomware

Syncplify.me Server! protects against ransomware. The Virtual File System feature in particular protects backup data, which is a ransomware's favorite target.

WILMINGTON, DELAWARE, UNITED STATES, June 14, 2017 /EINPresswire.com/ -- [Syncplify](#), Inc., a young yet award-winning software development company that delivers enterprise-grade secure file transfer solutions (FTPS/SFTP client and server), in the wake of these days [ransomware](#) outbreak, announced that Syncplify.me Server! has been providing 100% protection from all forms of ransomware since its inception thanks to its unique structure and its virtual file system.

A Virtual File system is a storage virtualization layer that allows an administrator to choose among different ways to access the underlying file system. "When a system is compromised and the [VFS](#) bond is severed, there is no way for the ransomware to access the VFS-protected back-end storage" said Fjodr Soyevskji, Syncplify's Chief Technology Officer. To date, no backup protected by a cleverly configured Syncplify.me Server! v4.1 has ever been compromised by any ransomware.

Syncplify software products are available now. Syncplify.me Server! is free for personal use, and paid licenses are available starting at \$199.00 for the "Basic" version. Syncplify.me FTP Script! is priced at \$49.00 per client, while Syncplify.me FTP! is free for everyone and for any use. All products support the Windows operating system, starting from XP to the latest Windows Server 2016, both 32 and 64 bit.
