Market Research Future

Global [vulvar cancer market](#) at a CAGR of 5.8% during forecasted period 2017-2023

Vulvar cancer is squamous cell skin cancer that occurs in elderly women. It is one of the rare type of cancer and the 4th common gynecologic cancer. Human papillomavirus infection, vulvar intraepithelial neoplasia, heavy cigarette smoking and many other things are major risk factors for this diseases. Beside these women suffering from HIV are also prone to develop vulvar cancer. The major driving factor for this market are increasing prevalence of vulvar cancer, continuous improvement in technology, growing consumer awareness and government's initiatives. While high cost, availability of HPV vaccines and side effect of the therapy are the major restraining factor for the growth of

this market.

As per region global vulvar cancer market is segmented into North America, Europe, Asia Pacific along with Middle East and Africa. Due to increasing prevalence of vulvar cancer, growing technological development and improvement in treatment all these are responsible for making the North American vulvar cancer market as the largest market. Europe is the second largest market followed by Asia Pacific. Due to continuous development in the healthcare sector and continuously growing population all these has led to growth of this market in Asia Pacific region.

Commenting on this report, an analyst from Market Research Future (MRFR)’s team said that the global vulvar cancer market is expecting a swift growth during the forecasted period. Vulvar cancer is a rare disease that accounts for only 0.6-0.7 % of total cancer types. The increasing prevalence of vulvar cancer in last few years has driven its market. Beside this government’s initiatives from all over the globe and development of healthcare research sector has boosted this market. While high cost of treatment and side effects of these treatments may hamper the growth of this market.

This study was conducted using an objective combination of primary and secondary information including inputs from key participants in the industry. The report contains a comprehensive market and vendor landscape along with SWOT analysis of key vendors

Regional Analysis

The global vulvar cancer market is segmented into four regions namely North America, Europe, Asia Pacific along with Middle East and Africa. North America has the largest market of vulvar cancer. According to American Cancer Society, in 2016 approximately 6200 new cases were diagnosed with vulvar cancer in US. As per latest research, women suffering from HIV are more prone to vulvar cancer. As per statistics 1.1 million people in US are suffering from HIV and 1 in 7 don’t know that they are HIV-positive. Increasing prevalence of HIV in women is the major factor to develop vulvar cancer. Besides this technological advancement and the improved healthcare sector in North America has increased the possibility for success of vulvar cancer treatment. In the last five years survival rate of vulvar cancer has increased and reached 70 %. Young women are more prone to vulvar cancer because of their connection with human papillomavirus (HPV).
