

# Rhino Fleet Tracking Offers Fleet Owners their GPS Tracking App

*Rhino Fleet Tracking offers their customers a GPS Tracking App to track their fleet or see where their vehicle was days before.*

ARGYLE, TEXAS, USA, June 28, 2017 /EINPresswire.com/ -- In the past, business owners who hoped to track their fleet or see where their vehicle was days before were forced to log into a program on their computer or maybe a web-based application.

Now, the proliferation of Android phones and the iPhone allows every business owner to get real-time information on their mobile workforce just by opening an app. In the case of [Rhino Fleet Tracking](#), business owners can check on the whereabouts of their vehicles in just seconds through their [GPS Tracking App](#). Many of their customers never log into tracking applications on a computer at all!

Imagine a landscaping foreman or landscaping company owner being able to find any of their trucks or any piece of equipment just by opening the app on his phone and pushing a button.

Further, the owner of the fleet can also go back in history to see very stop and the path taken by every vehicle for the last 30 days. So, if a customer questions whether their yard was mowed or things trimmed, the owner or manager can answer that questions quickly and efficiently.

About Rhino Fleet tracking

Rhino Fleet Tracking systems optimize fleet performance for companies of all sizes. They work with customers in all 50 United States, and in many countries across the globe.
