Commenting on the report, an analyst from Market Research Future (MRFR)'s team said: The market for Obesity Management is growing moderately and expected to continue its growth similarly in near future. Obesity and overweight occurs due to energy imbalance between calories consumed and calories distributed in body. Physical inactivity and no exercise leads to obesity and overweight.

Obesity can create many medical complications such as high blood pressure, heart attack and other heart related diseases and diabetes. According to report of World Health Organization (WHO), 41 million children under the age of 5 were overweight or obese and 600 million adults were obese in 2014. Few decades ago, obesity was limited to developed nations but now the population of obese people are rapidly increasing in low and middle income developing nations. New drugs and supplement development, technological advanced medical solutions and increasing medical facilities are leading the market growth for obesity management. Increasing customer awareness regarding health is encouraging fitness equipment manufacturers to create more advanced and useful equipment for exercise. Global Obesity Management Market was around US\$ 4.17 billion in 2015 while it is expected to reach USD 6.2 billion by 2022 at a CAGR of 8.2% during the forecast period. There are some factors that are inhibiting the growth of the market such as side effects of drugs, high cost of surgeries, lack of knowledge about disorder, misinformation about weight loss products etc.
