Market Research Future

Capnography is the technique of monitoring of the concentration or partial pressure of carbon dioxide (CO₂) in the respiratory gases. Capnographs are used as a monitoring tool during anesthesia and intensive care. It is usually presented as a graph of expiratory CO₂ plotted against time. The plot may also show the inspired CO₂, which is of interest when rebreathing systems are being used. The capnogram is a direct monitor of the inhaled and exhaled concentration or partial pressure of CO₂, and an indirect monitor of the CO₂ partial pressure in the arterial blood.

Technological advancements, rising prevalence of respiratory diseases, and limitations in the use of pulse oximeter are some of the factors responsible for the growth of the capnography market. The market for capnography is booming.
