

Tie National Delivers the Future of Cloud Wi-Fi with Samsung Wireless Enterprise

The most powerful Wi-Fi in the nation is self-optimizing and can operate without an onsite controller.

AURORA, IL, UNITED STATES, July 24, 2017 /EINPresswire.com/ -- Tie National announces their strategic partnership with Samsung Wireless Enterprise, which adds Cloud Wi-Fi to [Tie National's comprehensive portfolio of business technology solutions](#). Tie National's Cloud Wi-Fi provides innovations which similar products on the market have not been able to deliver. On top of the expected compliance with HIPAA and PCI, the service includes more innovative features made possible by Samsung's unsurpassed dedication to advancing wireless technology.

Tie National, LLC

“Tie National brings a deep bench of expertise to their customers, and we are really excited to partner with them. Our goal is to help our partners and the end customers grow their businesses, manage costs, and compete by leveraging the most powerful enterprise Wi-Fi solution in the marketplace,” said James Rakovan, Head of Sales, Samsung Wireless Enterprise.

“

Building an advanced wireless network gives businesses a foundation to make use of big data in marketing and sales, and now that foundation is affordable.”
Michael R. Durante, President of Tie National, LLC.

Samsung Wireless access points use 4G LTE technology for powerful Wi-Fi, which uses the Air Equalizer enhancement to control device speeds. Exceptional performance is possible via self-optimizing load balance software, which allows roaming without interference. Samsung also brings their Voice Aware Traffic Scheduling to Tie National's Cloud Wi-Fi solution. This feature automatically identifies voice and video

from data over the wireless network to prioritize streaming and phone calls thus delivering the best possible experience to the end user. The most remarkable advantage the cloud Wi-Fi presents is its unique ability to operate with full features even when the controller is offsite in Tie National's cloud or hosted at the customer's data center.

“Samsung's knowledge of wireless technology is light years beyond any of their competitors in part because developers are hearing first hand feature requests from the field through their sales engineers. This puts our customers' requests directly into the hands of the people who can make the changes,” said [Michael R. Durante, President of Tie National, LLC.](#)
